Subject: Monday Remarks for Aviation Day
Governor:

I finally got an answer about the order of the program. I've attached a Word document (first page is event details, pages 2-3 your remarks and the rest is background.) The last of your remarks is the introduction of the speaker to follow you.

Please let me know if you have any trouble accessing this and I'll re-send.

Beth

Thank you General Campbell and all of you here today for your warm welcome! I'm so happy to join you for Aviation Day.

In 1886, Mark Twain said, "The air up there in the clouds is very pure and fine, bracing and delicious. And why shouldn't it be? —it is the same the angels breathe."

And he hadn't been in a plane! He said this 17 years before Orville Wright flew the "Flyer" at Kitty Hawk (North Carolina) in 1903!

How many of you have watched an eagle soar across our Alaskan skies and wanted to do the same?

(Pause)

Flying teaches you that you can accomplish anything if you put your mind to it, it's so challenging. No two flights are the same. You learn patience and how to figure things out for yourself — plus it's a lot of fun!

Alaska is such a unique place — nowhere else in the world do people depend on aviation. Airplanes are the only way to travel to many of the most remote parts of our state.

Because of our remote, unpopulated, rugged and diverse landscape, Alaska is on the cutting edge of research and development for aviation.

One example is a new digital map of our state — it's being created to more accurately show elevation, and location of mountains, rivers and valleys.

Aviators rely on these kinds of accurate maps in simulators — and to stay out of danger in real-world scenarios.

11/9/2009

Models and simulators are important – they help us learn how to build aircraft and they replicate the experience of flying an aircraft as closely and realistically as possible.

Two very famous pilots – and Apollo astronauts – Neil Armstrong and Frank Borman began their aviation careers with airplane models. Borman commanded Apollo 8 the first spacecraft to fly around the moon and Armstrong was the first person to step foot on the moon.

(pause)

Aviation safety is improving in here in our state and across the nation because of Alaskan-led development of new aviation and space surveillance technology.

Now, for those of you who think you might be interested in aviation, the industry needs people like you to be pilots, flight instructors, air traffic controllers, mechanics and engineers.

Aviation is a career that involves all of the subjects you're studying – math and science are important – but so are language arts, social studies.

These would be great career paths for you to choose – and these are jobs that we will need in Alaska.

I'd like to close with a quote from Amelia Earhart, a famous woman pilot. She said, "You haven't seen a tree until you've seen its shadow from the sky."

I encourage any of you here today – young men and young women alike – to pursue your passion – if you work and study hard, you can achieve anything!

(Pause)

I'm now pleased to introduce Roberta Degenhardt (Day-ghen-hart), a professional pilot with more than 11,000 hours of flight time. She is rated in both jets and helicopters.

Inspired by flying with her father, a private pilot who owned a Piper Tri-pacer, she decided to pursue a career in aviation. She is a graduate of Embry-Riddle Aeronautical University in Daytona Beach, Florida.

Roberta returned to her home in New York, where she worked as a flight instructor and flew as a charter pilot on multi-engine aircraft including the Beech Baron, Piper Navajo, Beech Kingair, Cessna Citation 550, Canadair Challenger 603. She has also piloted helicopters, float planes and gliders.

In 1995 Roberta left corporate aviation for a job flying for Federal Express, which brought her to Anchorage for the first time in January 2000. Having visited all 50 of the United States, and numerous other countries, she decided to make Alaska her home and moved here in March of 2001.

WASILLA

-- Think Gov. Sarah Palin is an interesting person?

You haven't met Chuck and Sally

Heath, the Wasilla couple responsible for bringing Alaska's first female governor into this world. From hunting and hiking to fishing and skiing, there's very little Alaska's first parents have not tried outdoors. And at 69 and 67, respectively, they show no signs of slowing down.

"When it comes to taking advantage of all of Alaska's amazing outdoor opportunities, they seize those opportunities -- spring, summer, winter and fall," said Palin of her parents.

"They go without a lot of sleep, I think, but they still have more energy than anybody else I know.
